

ENTaP Academy (A) / ENTaP University (U)

Platform Vision Review

Please compare the following vision against the current implementation and planning documents. The goal is to identify what already exists, what partially exists, and what remains to be designed. Do **not** implement anything yet unless it is already substantially complete. This is an architectural review.

Core Vision

ENTaP Academy (A) and ENTaP University (U) are **ENTaP platform systems**, not Swarmfront features.

Originally conceived as Swarmfront Academy and Swarmfront University, the vision has evolved into a platform-wide educational and competitive ecosystem that every ENTaP title can participate in.

Every future ENTaP game should plug into the same Academy/University ecosystem.

Core Philosophy

ENTaP is not simply a launcher containing multiple games.

ENTaP is a long-term player ecosystem.

Players should be able to remain inside ENTaP for years while:

- growing as players
- changing games
- changing schools
- joining new Hives
- accumulating history
- keeping one persistent identity

The games may change.

The player's identity never does.

Player Lifecycle

Example progression:

Middle School ↓

ENTaP Academy

↓

High School Competition

↓

Conference

↓

District

↓

State

↓

National

↓

College

↓

ENTaP University

↓

Conference

↓

Regional

↓

National

↓

Adult Open Competition

Hive Leadership

Mentor / Veteran

This is not necessarily age-gated.

It is affiliation-based.

School Affiliation

Players may optionally associate themselves with:

High School

College

Other approved organizations in the future.

Example:

Barlow High School

Conference: Mt. Hood Conference

Players choose:

"My school."

Players also answer:

"Who is your biggest rival?"

Example:

Gresham High School

The system aggregates responses.

If overwhelming consensus develops, ENTaP may recognize that rivalry as the platform rivalry.

This is community-driven rather than administrator-defined.

Conferences

Schools naturally belong to:

Conference

District

Section

Region

State

National

ENTaP should model these real-world structures where practical.

The goal is to let players represent schools they already identify with rather than inventing fictional organizations.

Championships

Possible structure:

School

↓

Conference Championship

↓

District Championship

↓

Sectional Championship

Regional Championship

State Championship

National Championship

Each ENTaP title should be able to plug into this competitive framework.

Hives

Hives remain separate from schools.

Players belong to:

School affiliation

AND

Hive

These solve different problems.

School:

real-world identity

Hive:

social/team identity

Both persist across games.

Cross-Game Identity

Players keep:

ENTaP account

Friends

Honey

Hive membership

Achievements

History

Across:

Swarmfront

Operation Fury

Operation Long Horizon

Future ENTaP titles

Changing games should not reset platform identity.

Honey

Honey remains platform-wide.

A student can earn Honey in:

Swarmfront

Operation Fury

Operation Long Horizon

Future titles

The Honey follows the player.

Changing schools or games does not reset platform progression.

Warpath

Warpath is platform philosophy.

Each game themes it differently.

Swarmfront: Warpath using Nectar.

Operation Fury: Warpath using Fury.

Future titles: Game-specific theme.

The framework remains identical.

Competitive Rating

Each title themes its competitive rating.

Examples:

Swarmfront: Wax

Operation Fury: Command

Future titles: Theme-specific names.

All follow the same competitive philosophy.

Long-Term History

One of ENTaP's core values is preserving player history.

Examples:

Joined ENTaP

Joined first Hive

First tournament

Conference Champion

State Champion

National Champion

Hive Leader

Platform anniversaries

Cross-game achievements

The player should accumulate history rather than restarting every time a new game launches.

Recruitment

School affiliation also improves player acquisition.

Example:

Barlow develops a strong player base.

Most Barlow players identify Gresham as their primary rival.

ENTaP can then promote the platform to Gresham students by highlighting the existing rivalry.

The rivalry emerges from player consensus rather than administrator assignment.

School Support

Long-term vision:

School competitions may eventually generate recognition and prize support for participating schools or approved student programs.

Potential beneficiaries include:

Athletics

Music

Arts

Robotics

Academic clubs

Other student organizations

Specific legal, fundraising, and administrative implementation is intentionally out of scope for this review.

Platform Principles

ENTaP is built around four pillars:

Identity One persistent account across every game.

Community Persistent Hives, friendships, and shared Honey.

Competition Shared competitive philosophy with game-specific implementations.

Affiliation Real-world schools, conferences, colleges, and organizations provide continuity beyond any individual game.

Review Request

Please compare this vision against the current codebase and planning documents.

For each major section above, report:

1. Already implemented
2. Partially implemented
3. Planned but not yet implemented
4. Missing architecture
5. Potential conflicts with current systems
6. Recommended architectural changes (if any)

The goal is to understand where the platform already supports this vision and where future work will be required.
