

# ENTaP Honey Economy Constitution v1

## Purpose

This document captures the design decisions made during the initial Honey economy design session. These are intentional design decisions, not balance values. Numerical tuning will come later.

## Core Currencies

### Honey

Honey is the permanent cross-platform ENTaP currency. It carries across Swarmfront, Operation Fury, Operation Long Horizon, and future ENTaP titles. Honey is primarily intended to create community value rather than individual power.

### Nectar

Seasonal Battle Pass progression. Earned frequently through play. Many Battle Pass rewards will themselves grant Honey.

### Wax

Competitive ranking/progression. Separate from the economy and never directly interchangeable with Honey or Nectar.

## Core Philosophy

- One Honey balance exists per player across the ENTaP platform.
- Players are encouraged to join Hives because Honey is most valuable inside a Hive.
- Honey belongs to the player and follows them if they leave a Hive.
- A Hive's purchasing power equals the sum of all current members' Honey balances.
- There is no separate Hive wallet or treasury in Version 1.
- Honey never purchases gameplay power for individuals.

## Hive Spending Model (Version 1)

When Hive leadership approves a purchase, every member contributes automatically in proportion to their current Honey balance. Example: If the Hive has 20,000 Honey and buys a 10,000 Honey item, each member contributes 50% of their own Honey. Members always sacrifice the same percentage of their holdings. Before confirmation, every player should be able to see exactly how much Honey the purchase will cost them.

## Primary Honey Uses

- Hive banners, emblems, branding, and identity.
- Hive-wide cosmetic skins.
- Hive recruitment packages.
- Tournament and contest entry fees.
- Elite buff packs (limited-use strategic buffs, not permanent stat boosts).
- Additional future Hive prestige items and platform cosmetics.

## Recruitment Packages

Recruitment packages should reward new members over time to discourage 'join, collect, leave' behavior. Rewards unlock progressively after remaining with the Hive for defined periods.

## **Honey Sources (Priority Order)**

### **Platform Growth**

- Purchasing Honey.
- Purchasing items from the store (returns a meaningful Honey reward).
- Referring a new player who remains active for a defined period.
- Official platform events.

### **Competitive Success**

- Money async matches.
- Money tournaments.
- Weekly, monthly, and seasonal contests.
- Championship placements.

### **Competitive Participation**

- Free async modes.
- Free tournaments.
- Competitive objectives.

### **Engagement**

- Complete all async maps.
- Cross-title objectives.
- Consecutive-day streaks.
- Battle Pass milestones.

### **Community**

- Social sharing.
- Creator/community events.
- Watching official championships.
- Community challenges.

## **Economy Principles**

- Honey rewards actions that strengthen the ENTaP platform.
- Honey should remain meaningful and relatively scarce.
- Honey should not be granted simply for grinding matches; competitive success and meaningful participation should matter.
- Anti-farming safeguards will reduce or eliminate Honey rewards for repeated matches against the same opponent(s) when abuse is detected, while still allowing play.
- Every ENTaP title should contribute toward the same Honey balance.

## Open Questions

- Exact Honey earn values.
- Exact item pricing.
- Recruitment package unlock schedule.
- Buff pack contents and pricing.
- Tournament entry pricing.
- Long-term Honey sinks and legendary Hive investments.
