

ENTaP Warpath Framework v1

Working Name

The seasonal progression system will be called the **Warpath**. The name fits Swarmfront, Operation Fury, Operation Long Horizon, and future ENTaP titles better than 'Battle Pass' or 'Battle Path' because it emphasizes an earned journey rather than a transaction.

Purpose

Warpath measures seasonal engagement. Players advance by earning Nectar. Warpath is intentionally separate from Honey (platform economy) and Wax (competitive prestige).

Membership Tiers

Three participation tiers are planned:

- Free Warpath – slowest Nectar progression.
- Premium Warpath – approximately 1.3× the Free progression rate.
- Elite Warpath – approximately 1.6× to 1.7× the Free progression rate.

The intent is that paying players progress comfortably faster without making free players feel that completion is unattainable.

Progression Philosophy

Most players should be capable of completing the primary Warpath through consistent seasonal play. Premium and Elite primarily accelerate progress rather than replace gameplay.

Prestige Levels

After the primary Warpath (for example Level 100), progression enters prestige levels.

Prestige progression is based on historical completion data, not fixed guesses. Each season the requirements are tuned so that progressively fewer players reach the highest levels.

Example philosophy: only the most dedicated ~5% of historical completers eventually reach the final prestige level.

Premium and Elite Extensions

Premium players may access additional premium-only levels beyond the standard path (for example through Level 110).

Elite players receive the final prestige extension (for example Levels 111–120).

Exact level counts remain to be determined after telemetry is available.

Seasonal Decision Nodes (Future Feature)

Future versions may contain hidden Decision Nodes scattered throughout the Warpath.

Their positions change every season. Players never know in advance which levels contain one.

When encountered, players make a meaningful choice, for example:

- Elite Buffs for themselves.
- Classic Buff Packs for the entire Hive.

The community only sees aggregate outcomes, creating interesting Hive discussions without publicly exposing individual choices.

Decision Nodes are intentionally deferred beyond Version 1 but should remain part of the long-term vision.

Prestige Rewards

Late Warpath levels are ideal for low-cost, high-prestige rewards such as:

- Season-specific profile badges.
- Exclusive cosmetics.
- Historical achievement NFTs or equivalent collectible proofs of accomplishment.

The emphasis is on rarity and recognition rather than gameplay power.

Guiding Philosophy

Honey measures contribution. Wax measures competitive excellence. Warpath measures seasonal commitment. Every future feature added to the Warpath should reinforce that purpose.
